

STAT

PLANS AND PROGRAMS STAFF WEEKLY REPORT FOR
PERIOD ENDING 16 NOVEMBER 1983

1. Progress Report on Tasks Assigned by the DCI/DDCI:

No tasks assigned during this reporting period.

2 Items or Events of Major Interest that have Occurred
During the Preceding Week:

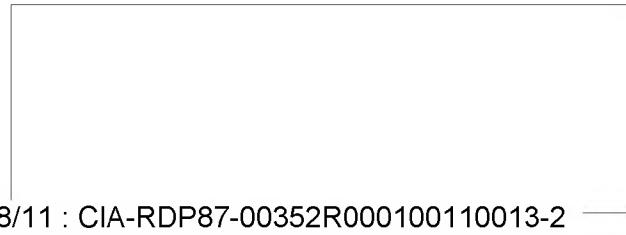

a. Data Administration (DA). The Chief, DA/P&PS, is a member of the Workstation Environmental Working Group, a sub-function of the CIA Information Systems Board (ISB). This group has completed its initial study of the requirements for the near term workstation (computer terminal). In simplest terms, this terminal is recommended to be either a Delta Data, Wang, or PC; all three would be networked to ODP mainframes. The ISB will now evaluate the content of this initial study. The report contains a listing of current workstation hardware investment (Agencywide, as of October 1983):

Delta Data Terminals	2,303
Printer Terminals	959
Wang Terminals	2,886
Wang Alliance CPUs	262
Wang-25 CPUs	117
Wang-20 CPUs	41
Personal Computers	219

By the time LIMS goes on-line, computer terminals (and the knowledge thereof) should become commonplace. The establishment of the DA function is none too early!

b. Regulations Revisions. P&PS concurred in the proposed revision [redacted] National Intelligence Council.

WEEKLY STATUS REPORT
Week of 7 to 11 November 1983

I. Major Activities During the Past Week:

A. Support to OL:

STAT

[Redacted]

ICS (Inventory Control System). The processing of detail records generated through the I006 menu has been corrected. The records were being created with a partial indicator being set on all transactions and no final indicator was being generated. A review of the specifications with the Data Base Manager revealed several flaws in the original design. The specifications were revised and the GIMS procedure was modified accordingly. Testing of these changes was successful and the new code was placed in production. (U)

Several modifications have been made to the XCLP GIMS procedure. These changes are a possible solution for problems with the DCN-INDEX file and are currently undergoing testing by the Data Base Manager. (U)

STAT

On 7 November we attended a meeting with [Redacted] Data Base Control Center, ODP, at Headquarters. He requested several changes be made to correct problems with the nightly processing of the GAS Enhancement interface procedures. The modifications were applied and were placed in production on November 9th. [Redacted] (U)

STAT

SECOND (Security Contractor Data System). New values were added to the CONTRACTOR SECURITY LEVEL (CSL) and the SECURITY COMPARTMENTED INFORMATION (SCI) attributes of the CONTRACTOR file. This task was completed in support of the Security Staff, OL.

STAT

[REDACTED] (U)

STAT

REALESTATE (Realestate System). On 9 November we met with [REDACTED] Real Estate Branch, RECD/OL, and discussed new requirements for storing and reporting Agency domestic real property holdings information. Future meetings will be planned when a System Requirements Document (SRD) is completed.

STAT

[REDACTED] (U)

II. General Items:

None to report.

III. Problems:

A. Support to OL:

CONIF (Contract Information System). CONIF users have recently been experiencing problems with their XEROX reports. They receive listings indicating that the processing completed successfully, but they never receive the actual report. The JCL for the reports resides on the CONIF share pack and upon investigation, it appears that some of the reports are under the wrong JCL file name. Therefore, when the customer attempts to produce report 6, they get a copy of report 7. This also explains why they have been receiving reports that they don't request. As there are numerous reports on the share pack, problems are being dealt with as they arise. [REDACTED] (U)

STAT

IV. Upcoming Events:

None to report.
